SKILLS

- PythonLLM Integration
- TensorFlow / PyTorchJava 17/21
- Spring BootCloud (AWS, Azure)
- DockerKubernetesCI/CD
- SQL (PostgreSQL)
- React.js / TypeScript
- Microservices

EXPERIENCE

ŁUKASZ GUZICZAK

AI Solutions

SUMMARY

AI Solutions professional with 5+ years of production software engineering and MSc in AI & Machine Learning. Integrating LLMs and AI dev tools (Claude Code, Codex, Copilot CLI) into enterprise applications since 2024. Strong engineering foundation in Python, Java, Spring Boot, and cloud infrastructure (AWS, Azure, Docker, Kubernetes). Building intelligent, data-driven systems across healthcare, aerospace, IoT, and finance domains.

NOW

2025 → AI/ML Engineer

Natek · Software House

EU AI Act compliance · LLM-powered workflows (Claude)

2024 → MSc Informatics: AI & Machine Learning

WSB Merito University in Wroclaw

Thesis: Multi-label ECG pathology classification with ViT + DINO

WORK EXPERIENCE

AI/ML Research Engineer — IoT

2025

Astek · Software House

Project: BikeBox – smart secure bicycle storage system (R&D)

- Developed IoT backend with real-time sensor data processing and monitoring pipelines.
- Trained predictive occupancy model enabling real-time booking decisions based on station demand forecasting.
- Designed microservices architecture for scalable smart infrastructure data collection.

AI Solutions — Healthcare Analytics

2024 – 2025

Kamsoft · SaaS

Project: AI-powered analytical decision support system for healthcare

- Built analytical automation features with data-driven decision support for medical diagnostics.
- Engineered optimized data processing pipelines for large-scale healthcare datasets.

ML & Data Engineer — Aerospace

2024

Thorium Space Technology · Aerospace

Project: Data-driven resource management for telecommunications platforms

- Designed intelligent resource allocation systems for satellite communication platforms.
- Built real-time telemetry processing modules for satellite bandwidth allocation optimization.

WORK EXPERIENCE (CONT.)

AI-Assisted Data Engineer

2023 – 2024

Right Information · Software House

Project: ERP system for payments, accounting and payroll

- Migrated legacy system to modern architecture; pioneered AI-assisted development with ChatGPT.
- Implemented automated data processing workflows with intelligent notification systems.

*"I highly recommend Lukasz as a valuable, hardworking software developer..."*

– Filip Lorek, Founder & CEO

Data Engineer

2022 – 2023

Streamsoft · SaaS

Project: ERP software and financial technology solutions

- Developed data-intensive ERP solutions processing large-scale financial datasets with Java.

*"He is an exceptionally hard worker who works well with others..."*

– Zbigniew Wesołowski, Java Developer

Software & Data Engineer

2022

Luxoft · Software House

Project: ERP systems and financial applications

- Built enterprise data systems with Java/Spring/Liquibase for high-volume financial transaction processing.

Research Engineer — Data Science

2021 – 2022

University of Twente, Netherlands · International

- Developed data processing and scientific visualization applications for research projects.
- Designed Python backend for automated analytical workflows and data pipelines.

EDUCATION

MSc Informatics: AI & Machine Learning

2024 - 2026

WSB Merito University in Wrocław

Thesis: **Multi-label ECG pathology classification with ViT + DINO**

MEng & BEng in Electronics

2016 - 2021

Wrocław University of Science and Technology

Master's thesis written in English
