

ŁUKASZ GUZICZAK — AI ENGINEER

In the lab since 2016. In production since 2024. Not since ChatGPT.

Currently embedded at a bank — on-prem, regulated.

They say AI loses the thread past 1,000 lines of code.

Cute.

That's where I start — **20,000** lines.
One file.
One person.

A month to a working PoC. Three to production. No team.

Their teams maintain it. I'm on the next.

The code says the rest.

ŁUKASZ GUZICZAK

AI Engineer

LLM systems in production · on-prem GenAI · Document AI · EU AI Act

Summary

AI Engineer who ships LLM systems to production. Sole engineer of an on-premise document-AI platform — local vision + language models on company GPUs, built for EU AI Act readiness. Creator of **OpisAI**, a commercial AI clinical-documentation assistant (built solo, sold). ML from the foundations since 2016 — Electronics, Stanford's ML (2020); shipping it since 2024. 5+ years of production engineering (Python, Java/Spring, cloud) across healthcare, aerospace and fintech; MSc in AI & ML — thesis on medical-imaging transformers.

Work Experience

Consulting roles (Natek · Astek · Luxoft) are project-based B2B engagements.

OpisAI — Own Product (built & sold)

2026

Founder & sole engineer · AI scribe for veterinary clinics

Product: one-click structured clinical notes inside existing practice software

- Turns raw visit notes into structured clinical documentation — anamnesis, exam findings with vital-parameter panels, working diagnosis — via schema-driven prompting.
- Writes results straight into the practice-management system via Windows UI automation — zero workflow change for clinicians; Claude / GPT / Gemini backend.
- GDPR-first: consent gates, local-only history with retention policies, integrity hashing. Sold commercially, in daily clinical use.

Python

Claude

AI Engineer — Document AI Platform

2025 – present

Natek · IT consulting (B2B) — embedded at a bank

Project: on-prem extraction from financial statements — in production, maintained by the bank's team

- Sole engineer end-to-end: architecture, model selection, GPU serving, evals and deployment — fully on-prem, no document ever leaves the network (GDPR, data sovereignty).
- Multimodal pipeline: vision models for layout & table understanding of scanned statements, local LLMs for semantic extraction into schema-validated JSON (structured outputs).
- Quantized open-weight models on company GPUs; field-level accuracy benchmarked against ground truth drives model & prompt iteration; human-in-the-loop review.
- Built for EU AI Act readiness: risk classification, decision logging, human-oversight checkpoints.

Python

PyTorch

Claude

Docker

PostgreSQL

AI/ML Engineer — IoT R&D

2025

Astek · IT consulting (B2B)

Project: BikeBox — smart secure bicycle storage system (R&D)

- Built event-driven IoT backend ingesting live sensor telemetry from a distributed station fleet; sub-second booking decisions end-to-end.
- Trained and deployed occupancy-forecasting models powering real-time booking and demand-based pricing.

Work Experience (Cont.)

AI Engineer — Healthcare Analytics

2024 – 2025

Kamsoft · healthcare software (SaaS)

Project: AI-powered analytical decision support system for healthcare

- Shipped clinical decision support modules surfacing diagnostic patterns to physicians at point-of-care.
- Engineered ETL pipelines for multi-tenant healthcare data under audit constraints.

Java

Spring

PostgreSQL

Docker

Python

ML & Data Engineer — Aerospace

2024

Thorium Space Technology · satellite communications

- Designed dynamic bandwidth-allocation engine for a satellite telecom platform, optimizing transponder utilization in real time.
- Built telemetry ingestion pipeline parsing live spacecraft streams for allocation decisions.

Java

Spring

PyTorch

PostgreSQL

Python

Software Engineer — ERP

2023 – 2024

Right Information · software house

- Led migration of legacy ERP modules to a modern Spring Boot stack; early adopter (2023) of LLM-assisted development workflows, later rolled out across the team.

Java

Spring

PostgreSQL

Git

Python

"I highly recommend Lukasz as a valuable, hardworking software developer."

— Filip Lorek, Founder & CEO · 2024

Data Engineer

2022 – 2023

Streamsoft · ERP & fintech software

- Developed data-intensive ERP modules processing high-volume financial transaction streams in Java.

Software Engineer

2022

Luxoft (DXC) · IT consulting (B2B)

- Built enterprise data systems with Java / Spring / Liquibase for high-volume financial transaction processing.

Research Software Engineer — Data Science

2021 – 2022

University of Twente, Netherlands

- Built scientific-visualization tooling and automated Python data pipelines for international research teams.

Education

MSc Informatics — AI & Machine Learning

2024 – 2026

WSB Merito University in Wrocław

Thesis: multi-label ECG pathology classification (ViT + DINO)

MEng & BEng in Electronics

2016 – 2021

Wrocław University of Science and Technology

Specialization: Advanced Applied Electronics — ML, numerical methods, IoT
