

ŁUKASZ GUZICZAK — AI ENGINEER

In the lab since 2016. In production since 2024. Not since ChatGPT.
Currently embedded at a bank — on-prem, regulated.

They say AI loses the thread past 1,000 lines of code.

Cute.

That's where I start — 20,000 lines.
One file.

One person.

A month to a working PoC. Three to production. No team.

Their teams maintain it. I'm on the next.

The code says the rest.

ŁUKASZ GUZICZAK

AI Engineer

SUMMARY

AI Engineer who ships LLM systems to production. Sole engineer of an on-prem document-AI platform — local vision + language models on company GPUs — and creator of OpisAI, a commercial AI clinical-documentation assistant built solo and sold. ML from the foundations since 2016 — Electronics, Stanford's ML (2020); shipping it since 2024. 5+ years of production engineering (Python, Java/Spring, cloud) across healthcare, space systems and fintech; MSc in AI & Machine Learning — thesis on medical-imaging transformers.

NOW

2026 → OpisAI — Own AI Product (built & sold)

Founder & sole engineer · AI scribe for vet clinics

Sold commercially, in daily clinical use · Claude / GPT / Gemini

2025 → AI Engineer — Document AI Platform

Natek · embedded at a bank

In production, maintained by the bank's team · local LLMs + vision · EU AI Act

WORK EXPERIENCE

AI/ML Research Engineer — IoT

2025

Astek · Software House

Project: BikeBox – smart secure bicycle storage system (R&D)

- Developed IoT backend with real-time sensor data processing and monitoring pipelines.
- Trained predictive occupancy model enabling real-time booking decisions based on station demand forecasting.
- Designed microservices architecture for scalable smart infrastructure data collection.

AI Solutions — Healthcare Analytics

2024 – 2025

Kamsoft · SaaS

Project: AI-powered analytical decision support system for healthcare

- Built analytical automation features with data-driven decision support for medical diagnostics.
- Engineered optimized data processing pipelines for large-scale healthcare datasets.

ML & Data Engineer — Space Systems

2024

Thorium Space Technology · Satellite Communications

Project: Resource management for satellite communications platforms

- Designed intelligent resource allocation systems for satellite communication platforms.
- Built real-time telemetry processing modules for satellite bandwidth allocation optimization.

WORK EXPERIENCE (CONT.)

AI-Assisted Data Engineer

2023 – 2024

Right Information · Software House

Project: ERP system for payments, accounting and payroll

- Migrated legacy system to modern architecture; pioneered AI-assisted development with ChatGPT.
- Implemented automated data processing workflows with intelligent notification systems.

*"I highly recommend Łukasz as a valuable, hardworking software developer..."*

– Filip Lorek, Founder & CEO

Data Engineer

2022 – 2023

Streamsoft · SaaS

Project: ERP software and financial technology solutions

- Developed data-intensive ERP solutions processing large-scale financial datasets with Java.

*"He is an exceptionally hard worker who works well with others..."*

– Zbigniew Wesołowski, Java Developer

Software & Data Engineer

2022

Luxoft · Software House

Project: ERP systems and financial applications

- Built enterprise data systems with Java/Spring/Liquibase for high-volume financial transaction processing.

Research Engineer — Data Science

2021 – 2022

University of Twente, Netherlands · International

- Developed data processing and scientific visualization applications for research projects.
- Designed Python backend for automated analytical workflows and data pipelines.

EDUCATION

MSc Informatics: AI & Machine Learning

2024 - 2026

WSB Merito University in Wrocław

Thesis: **Multi-label ECG pathology classification with ViT + DINO**

MEng & BEng in Electronics

2016 - 2021

Wrocław University of Science and Technology

Master's thesis written in English
